NATURAL SELECTION

A FINISH

A high-strength varnish coating, that delivers unparalleled performance, Strength, or a penetrating treatment with natural oil that emphasizes the tactility of wood.

PREMIUM QUALITY LAYER

The upper layer, made from the finest wood species, is the result of a careful selection of raw materials and unique production processes. Exclusive milling methods, such as innovative drying processes, are home to production secrets materials that gain new value at each stage. It's about striving for perfection from the beginning.

MULTILAYER TECHNOLOGY

The secret of parquet stability lies in the substrate layer: a special system of birch wood layers, with marine bonding, which enables the production of perfectly stable boards of large dimensions. The technology, made of multi-layer transverse fibers, ensures the non-deformability of every section. The support layers designed in this way have a higher mechanical strength capable of perfectly balancing the inevitable stresses of the layer above. This means excellent balance and product stability.

EVERLASTING BEAUTY

Lastra Di Legno selects high-quality timber species. With its specific technology, it is possible to sand the wooden floor repeatedly for a beauty that stands the test of time.

ECOLOGICAL ADHESIVES

In order to preserve the environment and health, all auxiliary products used in the manufacture of Lastra Di Legno floors are environmentally friendly, nontoxic and odorless. The adhesives meet the most stringent European standards in terms of solvents and formaldehydes.

GRADES SELECTION

No two pieces of wood are alike, even if they come from the same tree. Heartwood looks different than wood from the outer regions of the tree trunk. And depending on the wood species, wood from higher areas of the tree may have more knots than wood from further down. There are many criteria that define the typical character of a grade.

ELITE

Mixed grain, essentially even colour in connection with the typical features of the species. Possible small knots in some boards.

FIBRAMIX

Mixed grain. Some boards may show colour variations and knots. In the extra wide boards (from 140 mm width), knots maybe be even tight and open.

UNICA

Mixed grain and color variation. Presence of knots, both filled and open ones. Some wood boards may show sapwood according to the different wood species.

CERTIFICATIONS

PEFC™

The certification of the chain of custody stating the provenance of the products sourced from sustainable forests.

AWI

The certification of the industry standard in quality for architectural woodwork and a stamp of approval for construction professionals.

BUREAU VERITAS

The certification of the company's quality and environmental management system.

NWFA

The certification of the knowledge and expertise in the industry.
